

■ Stamped & Sealed Plans and Calculations

At Fire Design Associates (FDA), we ensure your project has everything it needs for approval – including professionally stamped and sealed fire protection plans and hydraulic calculations through our network of trusted, licensed partners.

- a) AHJ Requirement: Many jurisdictions require a licensed professional's stamp. Through our partners, we provide permit ready packages that meet this requirement.
- b) Single Point of Contact: You don't need to manage multiple consultants. We coordinate design, calcs, and stamping, saving you time and hassle
- c) Trusted Professional Network: Our partners are licensed fire protection engineers, civil engineers, structural engineers and mechanical engineers with proven expertise in NFPA 13, 13R, 13D, 14, 20 and 24 systems.
- d) Seamless Integration: Because we handle the coordination, the stamped documents flow directly from the same design process – no disconnect between design and approval
- e) Faster Turnaround: Our established relationships with licensed partners mean you get stamped drawings without long delays.
