

■ **As-Built Drawings & Revision Management**

At Fire Design Associates (FDA), we don't just design systems – We can also keep your drawings accurate, updated, and compliant through every stage of the project.

- a) Accurate Records: we can deliver true as-built drawings that reflect what was installed. This usually requires coordination with workers in the field and helps ensure smooth inspections, approvals, and turnover packages.
- b) Revision Tracking: Plan revisions take place on almost every project. These can be updated promptly so your team always works with the most current set – Reducing field errors and rework.
- c) AHJ & Owner Compliance: Most Authorities and owners require as-builts for final occupancy.
- d) Future-Proofing: Updated drawings provide a reliable reference for renovations, maintenance, and system modifications for years down the road.
- e) Professional Standards: As-builts can be provided in CAD/BIM format ready to use by contractors, engineers, and facility managers alike.
