

■ Permit-Ready Submittals

At Fire Design Associates (FDA), we can prepare complete, code-compliant permit/submittals. These are different from field installation plans in that they can be prepared faster and usually don't have the information necessary for installation by field personnel. These types of plans allow submittals take place in times where a permit is needed quickly, or many changes are expected so a completed, field installation set is not desired.

- a) Code-Compliance: Every submittal is designed to meet NFPA and local jurisdiction requirements.
- b) Complete Packages: We provide hydraulic calculations, system layouts, equipment data sheets, and supporting documents – everything needed for permit review.
- c) Save Time & Money: Permit ready plans means crews and suppliers aren't waiting on approvals to start procurement or scheduling for the project.
- d) Proven process: Our team has experience working with a wide range of AHJ's, making us efficient at navigating local requirements.
