

■ Field Ready Installation Plans

At Fire Design Associates (FDA), we can provide designs that go above just meeting code – they can be prepared for the field (there is a difference). Many plans created during the plan approval process just provide what is necessary to get the plans reviewed. Making plans ready for field personnel (Pipe cuts, Pipe tags, line numbers, dimensions, elevations, etc) is what the Contractors need.

- a) Build Without Guesswork: Drawings prepared for field personnel mean installers spend less time interpreting and more time installing.
- b) Pipe Routing: Plans are designed with field practicality in mind – minimizing clashes, bends, and wasted material.
- c) Smoother projects: From Bidding through installation, field ready plans provide a much more accurate view of what the Fire Sprinkler system will look like.
